CHARACTERISTICS:	White to off white powder. Sodium salt of the sulfated linear glycosaminoglycan obtained from bovine cartilages of healthy animals. Chondroitin Sulfate consists mostly of the sodium salt of the sulfate ester of N-acetylchondrosamine (2-acetamido-2-deoxy- β -D-galactopyranose) and D-glucouronic acid copolymer. These hexoses are alternately linked β -1,4 and β -1,3 in the polymer. Chondrosamine moieties in the prevalent glycosaminoglycan are monosulfated primarily on the position 4 and less so on the position 6. This material is non-irradiated, enzymatic HPLC tested and full USP tested.
